

STUDENTS IN TRACY SHISLER'S SCIENCE CLASSES at Cape Hatteras Secondary School of Coastal Studies are working with Dave Sybert, UNC Coastal Studies Institute Education Associate, to collect data from the Pamlico Sound. "They built the Basic Observation Buoy under the guidance of Dave and Education Programs Coordinator John McCord," described Shisler. "The group of students were trained on collecting data, translating the data using the provided tables, and uploading the data to be shared with other interested parties. February 8, they had a very successful day retrieving the BOB and uploading the data; on the 9th, they reset the instrumentation and redeployed the BOB." Students participating in this ongoing project include Lauren Mayberry, Miranda Veal, Macy Quidley, Westley Boylyn, Nita Wage, Liam Becker, Aaron Gavin, and Tanner Peele. From left, returning from deploying the BOB are Liam Becker, Aaron Gavin, and Tanner Peele; and in the classroom are Peele, Gavin, and Wage reset the scientific instrumentation.
